✦ NOVA WORKSPACE · BUSINESS ANALYTICS

NOVA : AI assisted business intelligence

Ask business questions in plain English, inspect the SQL behind the numbers, and explore performance through interactive visual reports.

✦ Ask NOVA

AI-to-SQL active · gemini-3.8-flash

Ask in plain English. With a valid Gemini key, NOVA generates a SQL query, runs it safely against SQLite, then explains the actual results.

Deploy

Supporting data

Product	Total_Units_Sold
Wireless Mouse	228
Keyboard	139
USB-C Hub	91
Laptop Stand	85
Monitor	50
Office Chair	27
Desk	18

Download query results (CSV)

Query inspector · SQL executed

```
SELECT Product, SUM(Quantity) AS Total_Units_Sold FROM sales WHERE lower(Status) IN ('completed',
```

AI proposes a single query; NOVA validates it, applies a SQLite read-only authorizer, limits execution time and output rows, and permits reads from the sales table only.

Questions use the full active dataset, independently of dashboard filters. SQLite is the source of numeric truth; the model only helps translate the question into a safe query.

Calculation policy

Recognized revenue = Quantity × Unit price − Discount amount

- Only `Completed` / `Complete` rows with a valid unit price are included in recognized revenue.
- Returned transactions, other statuses, and missing or invalid prices remain visible for quality review but do not contribute to revenue KPIs.
- Zero-quantity completed rows contribute zero revenue. These figures are revenue, not profit.
- Invalid dates, missing key dimensions, negative quantities, and negative discounts are rejected during upload.
